BACK-END DEVELOPER architects scalable APIs, web applications and cloud-native infrastructure. Leads modernization of legacy platforms and enterprise data systems delivering advanced performant software driving operational efficiency and aligning engineering outcomes with business growth.

APPLICATIONS PROGRAMMER Owner, Kohberger Associates, August 2024–Present

- Implemented predictive maintenance for industrial HVAC systems using real-time metric transfer and AI analytics, delivered via a C/C++23 embedded application integrated with a C# Core API, Entity Framework 8, and Python Pandas.
- Developed advanced application caching strategies using Memcached, Redis and MongoDB vastly enhancing application performance and increasing database throughput.
- Implemented Python Pandas Analytical Library for predictive maintenance through forecasting potential HVAC unit failures. System based on observing fluctuations in temperature and other metrics.
- Developed front-end applications using React 19 utilizing enhanced Concurrent Rendering for smoother UX load.
- Implemented AWS ELB and Route 53 for high-availability infrastructure; optimized CI/CD with Docker 27.2 and Kubernetes 1.33, reducing costs 30% and achieving 99% uptime.
- Tech Stack: AWS, EC2, Route 53, C/C++, C#, MSSQL, Entity Framework, .NET Core, Docker, Kubernetes

SENIOR API/WEB DEVELOPER Vice Media LLC, April 2021–July 2024

- Built a real-time web analytics dashboard using TypeScript, Node.js, GraphQL, and React.js to visualize site traffic, user sessions, and engagement metrics thus enabling marketing teams to monitor 4M+ monthly visits.
- Engineered modular data adapters using Node.js, automating the transformation and ingestion of complex data sets into 75+ PostgreSQL tables, boosting future migration efficiency and ensuring data integrity.
- Designed RESTful APIs using Express MVC and Node.js integrating third-party services (Stripe etc.), improving user experience and enhancing functionality.
- Tech Stack: Node.js, GraphQL, SQL, MySQL, Salesforce, MongoDB (NoSQL), Docker, AWS, CircleCI

SENIOR FULL STACK WEB DEVELOPER Cyber New York, February 2018–March 2021

- Led the transformation of a legacy .NET 4.5 Web Forms eCommerce platform into a modern, AWS-hosted, Python Flask Microservices architecture, doubling scalability and cutting deployment time by 50%.
- Led stress testing and benchmarking of a high-traffic e-commerce platform (300,000+ daily requests) using Siege CLI and Apache JMeter, ensuring zero downtime deploying a full-site rewrite for a \$150M+ annual revenue business.
- Spearheaded a Fortune 5000 eCommerce Rewrite Project to unify a fragmented architecture by integrating Hawk Search API, legacy SOAP services, and a MS-SQL backend; vastly improving cross-system cohesion.
- Tech Stack: Angular.js, ASP.NET Web Forms, C#, Python, Flask, MSSQL, MySQL, SQLAlchemy, Siege, SOAP

FULL STACK WEB DEVELOPER Lounge Lizard Worldwide Inc., July 2016–January 2018

- Built a multilingual, single-page web camera platform using Python (Django 1.9), AngularJS 2, and MySQL for a decade-long, 15-country Ivy League psychoanalytic research initiative.
- Developed a cross-platform messaging app using Xamarin Forms 2.3 & C# for a Fortune 500 company. Integrated RabbitMQ for real-time communication and MySQL for persistent data storage across iOS and Android platforms
- Engineered a Python 3 statistical analysis app using Pandas to process proprietary psychological datasets, boosting research efficiency and empowering data-driven insights by ~10%.
- Tech Stack: Angular.js, Bootstrap, WebRTC, Python, Django, Django ORM, Pandas, PyUnit, MySQL, SQL

MBA – FINANCE & DECISION SCIENCE / BA – SOCIOLOGY Stony Brook University
